

Spice Export Division

Connecting Nigeria's Rich Soil to Global Flavour Markets

FARMFORD Investment Limited is expanding Nigeria's footprint in the global spice trade through its Spice Export Division — a strategic initiative designed to unlock value from the country's vast agricultural potential and connect premium-quality spices from local farmers to international buyers.

Vision

To make FARMFORD a top-5 Nigerian spice exporter by volume and quality within five years — exporting "Proudly Nigerian" Flavors to the world under a traceable, sustainable brand.

Our Focus Crops

We specialize in the cultivation, aggregation, and export of high-value spices that are in strong demand across Asia, Europe, and the Middle East. Our core export products include:

- **Ginger** – sourced from Kaduna and Benue, processed and sun-dried to international standards.
- **Turmeric** – cultivated in Kogi and Nasarawa, prized for its high curcumin content.
- **Black Pepper & Cloves** – grown under contract partnerships with farmers in southern Nigeria.
- **Chili & Bird's Eye Pepper** – processed for both whole-dry and crushed exports.

Each spice is handled under strict quality-control systems, ensuring moisture content, colour, and aroma meet or exceed international specifications.

Value Addition & Processing

FARMFORD's export model goes beyond raw commodity trading. We are investing in cleaning, grading, drying, and packaging facilities that comply with EU and Middle East import standards (HACCP, ISO 22000, and FDA).

Our goal is to move Nigeria up the value chain — from bulk raw exports to branded, traceable spice products ready for retail and industrial use abroad.

Export Channels & Market Access

Through strategic partnerships with logistics providers and trade platforms such as **Dubai Multi Commodities Centre (DMCC)** and **APAPA export terminals**, FARMFORD ensures efficient global delivery.

Our target markets include:

- **Asia (India, China, UAE)** – for bulk spice processing.
- **Europe (Netherlands, UK, Germany)** – for natural and organic product lines.
- **North America** – for specialty ethnic markets.

FARMFORD's export logistics combine sea freight, consolidation hubs, and trade finance instruments that guarantee timely and transparent transactions for international buyers.

Empowering Farmers, Building Value

The Spice Export Division operates through contract farming and out-grower networks, engaging hundreds of smallholder farmers with training, inputs, and guaranteed offtake. This inclusive model ensures fair pricing, improved livelihoods, and traceable production — strengthening both the quality and sustainability of Nigeria's spice export value chain.
